

# Color Charge Approval Statement

## ***Investigative Ophthalmology & Visual Science***

*To avoid production delays, this form must be submitted with your final manuscript even if you have previously agreed, less formally, to bear these costs.*

Manuscript #: \_\_\_\_\_ Corresp. Author: \_\_\_\_\_

Title of Article: \_\_\_\_\_

IOVS asks authors to bear the cost of printing color figures in their manuscripts. The price of printing color images is currently \$500 per page. While the editorial staff will make every possible effort to ensure that the most economical arrangement of figures is achieved, it is not always feasible to print more than one color figure on a page.

Once this agreement is signed, images agreed to be printed in color will proceed through the production process and authors are obligated to pay for costs incurred.

If you choose not to print images in color, it is suggested that you convert these images to black and white and submit them with your final manuscript. This will ensure that the quality of the converted figures meets your expectations. Authors are cautioned that certain color images cannot be converted to black and white satisfactorily. Please advise the editor if any changes are made to the figures after the review process is completed so that an additional review can be conducted if necessary.

We, the undersigned authors, submit the following images to be printed in color and agree to bear the cost of printing:

Figure Number(s): \_\_\_\_\_

(Please list the specific figure numbers that are to be printed in color. Do not write in the total number of color figures.)

We understand that the cost to authors is \$500 per page and that it may not be possible, due to style and printing constraints, to print more than one image on a page.
